| 7. Odor Control | 14. Ceiling Products |

ENVIRONMENTAL SOLUTIONS

We only sell products that meet our criteria of being environmentally friendly and of the highest performance quality.

Each product's impact is analyzed with respect to health issues, durability, performance, life cycle, resource depletion, and energy conservation and consumption.

We provide materials and expertise to architects, designers, developers and the do-it-yourselfer. We also understand chemically sensitive clients and will listen to your specific needs and work with you to customize a solution.

| 8. Foundation Waterproofing | 17. Sustainable Wood Products |
| 9. Beds & Bedding | |

SOLAR POWERED FAN

Solar-Powered Attic Vent

The 20 watt photovoltaic solar panel delivers twice the power and removes 50% more hot air than other solar-powered attic fans. Installs on any roof, no electrical hook-up, no assembly, no electric costs or chance of fire.

STRUCTURAL INSULATED PANEL

Compressed-straw panels

are highly attractive because they make use of an agricultural waste product (waste straw is often burned in fields, contributing to air pollution). Agriboard saves time and money, and is manufactured in Texas.

INSULATION

Cotton insulation

is made from high quality natural fibers. It's extremely effective in sound absorption and thermal performance. It does not itch and is very easy to handle and work with. It also contains no chemical irritants and no VOC's. It's safe for you and the environment.
